NMM22

LINK 22 NETWORK MONITORING AND MANAGEMENT

FIELD PROVEN SYSTEM

A BRAND OF **CS GROUP**
DIGINEXT

The breakthrough real-time solution to assess and control the L22 Network performance in order to maintain a good connectivity between platforms and optimize the Tactical data exchange in accordance with the available transmission capacity

USES CASES

- Standalone system for JICO Cell

- Standalone or Integrated into CMS for Tactical Operator

- Operational NCS Monitoring for Radio Operator

CORE FEATURES

Operational NCS Monitoring
(Network Cycle Structure)

- Terminal troubleshooting
- Reception Quality
- Network Efficiency
- Record/Replay Mode

Network Monitoring

NILE Units Situation Display
- Connectivity
- Congestion Status
- NILE Units Status

Local NU performance
(Bandwidth Utilization, Reception Quality)

Network Management

- Media parameters selection
- Role Management
- Timeslot allocation
- Late Network Entry

KEY ADVANTAGES

User-Friendly Operation

Up-To-date with latest standards

Scalable roadmap

Fully tested against NILE products

Unique Monitoring Features at the Timeslot level
